

Right Sites. Right Patients. Maximize Enrollment.

# My Clinical Trial ID

**Transforming how sites are selected, patients are recruited and trials are enrolled**

**MyClinicalTrial (MCT) ID** is a query tool that positively impacts a study's feasibility, site selection and patient recruitment processes, by reducing timelines and decreasing costs. MCT ID can set up your study for success and meet your enrollment goals in two ways:

## MCT Site ID

Allows sponsors/CROs to assess a site's de-identified, validated patient counts, making qualified sites stand out during the feasibility process.

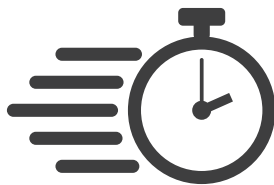

## MCT Patient ID

Rapidly identifies eligible patients utilizing de-identified, real-time medical data compared against a protocol's I/E criteria. When paired with our Local Enrollment Specialist solution, this platform makes it easy and efficient for busy sites to accurately identify and recruit eligible patients.

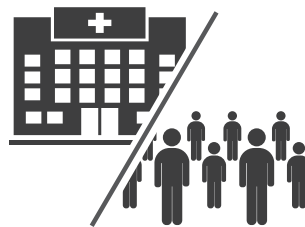

**MCT ID** is the key to avoiding trial delays and the solution to efficient, lower cost clinical trial execution.

*Decreases Costs*

*Saves Time*

*Identifies Sites & Patients*
